

A network is a set of devices connected by communication links. A node can be a computer or printer or any other devices capable of sending and or receiving generated by other nodes on the network. In a network a computer can communicate with other computers independently. In a computer network each user can separately logged in and logged out from the system.

DEPARTMENT OF COMPUTER SCIENCE

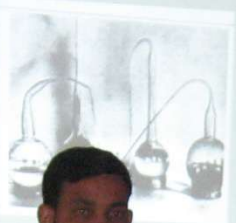

• The idea of **CREATIONISM** still persists in a modified version --- life on our planet have arisen spontaneously in some relatively simple form and subsequently with time higher and higher forms arose.

• The idea of **SPONTANEOUS GENERATION** (organisms could arise spontaneously) prevailed up to the middle of 19th century.

• The idea was proposed for all substances when Pasteur disproved that organisms could arise from non-existing
