Title: Maintaining Green Campus

Objective:

To Establish and maintain green spaces, gardens, and tree-lined avenues across the campus. Implement sustainable landscaping practices to minimize water consumption and promote biodiversity.

Context:

The context of maintaining a green campus extends beyond mere landscaping or the physical appearance of the institution. It encompasses a comprehensive commitment to environmental responsibility, sustainability, education, and community engagement. A green campus serves as a testament to the institution's dedication to fostering a better, more sustainable future for its community, and the world at large.

The Practices:

Maintaining a green campus involves adopting and implementing various sustainable practices that contribute to environmental conservation and reduce the ecological footprint of the educational institution. Implementing these practices collectively contributes to the creation of a green campus that is environmentally sustainable, socially responsible, and economically viable. It fosters a culture of environmental stewardship among the campus community, preparing students for a future where sustainability is a priority.

Evidence of Success:

- Document the introduction of new green spaces and their impact on biodiversity.
- Highlight any increased sightings of local flora and fauna on campus.
- To maintain the Biodiversity Register.
